Commitment to Achieving Net Zero

TIEVA Limited is committed to achieving Net Zero greenhouse gas emissions across Scope 1, Scope 2 and Scope 3 by 2033. This commitment exceeds the PPN 06/21 minimum requirement to achieve Net Zero by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of greenhouse gases that have been produced in the past and were produced prior to the implementation of carbon reduction strategies. Baseline emissions provide the reference point against which emissions reduction can be measured.

Baseline Year: 2024

The 2024 baseline has been restated in line with the current reporting methodology, emission factors and organisational boundaries used for the 2025 greenhouse gas assessment.

Baseline Year: 2025	
Emissions	TOTAL (tCO2e)
Scope 1	98
Scope 2	79.01
Scope 3	25,702.50
Total Emissions	25,880.21

Scope 3 included sources: Purchases goods and services, capital goods, fuel and energy-related activities not included in scope 1 or scope 2, upstream transportation and distribution, waste generated in operations, business travel, employee commuting, upstream leased assets, processing of sold products, use of sold products.

Current Emissions Reporting

The 2025 reporting year covers January 2025 to December 2025. Emissions have been assessed under operational control and include emissions generated in and outside the country of operation.

Baseline Year: 2025	
Emissions	TOTAL (tCO2e)

Scope 1	76
Scope 2	64
Scope 3	23,646.30
Total Emissions	23,786.30

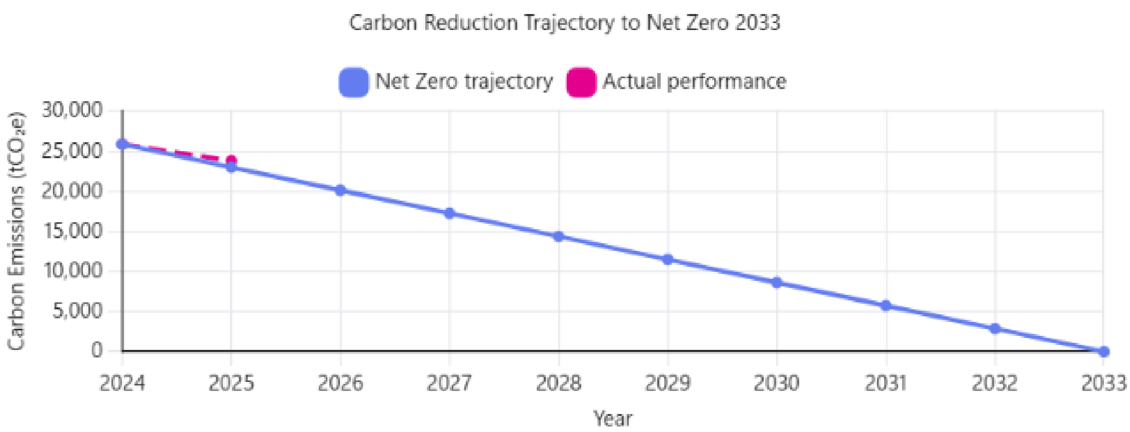
Scope 3 included sources: Purchases goods and services, capital goods, fuel and energy-related activities not included in scope 1 or scope 2, upstream transportation and distribution, waste generated in operations, business travel, employee commuting, upstream leased assets, processing of sold products, use of sold products.

Emissions Reduction Targets

In order to continue progress towards Net Zero, TIEVA has adopted the following carbon reduction targets.

TIEVA projects that carbon emissions will continue to decrease annually as part of its commitment to achieve Net Zero greenhouse gas emissions by 2033. Progress against this trajectory will be reviewed annually through TIEVA's greenhouse gas assessment process and updates to this Carbon Reduction Plan.

TIEVA will continue to focus on reducing emissions across scope 1, scope 2 and scope 3 categories through supplier engagement, sustainable procurement, operational efficiencies, optimisation of digital infrastructure and reductions in travel-related emissions.



Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed, implemented or are in place and will be in effect when performing public sector contracts:

- Completion of an annual greenhouse gas emissions assessment for the 2025 reporting year, covering scope 1, scope 2 and relevant scope 3 categories under operational control.
- Expansion of scope 3 measurement to include purchased goods and services, capital goods, fuel and energy-related activities, upstream transportation and distribution, waste generated in operations, business travel, employee commuting, upstream leased assets and relevant downstream / use categories.
- Identification of key emissions hotspots, including product purchases, digital activities, service purchases, travel and commuting, and freight.
- Supplier engagement prioritised as part of TIEVA's scope 3 reduction strategy, including assessment of supplier climate maturity and supplier progress.
- Employee engagement supported through employee survey activity and climate awareness opportunities.
- Assessment of digital emissions and identification of reduction opportunities linked to cloud optimisation cloud waste reduction and lower-carbon data hosting options.

Carbon Reduction Projects

TIEVA intends to implement and develop the following further measures:

- Establish and monitor emissions reduction KPIs for high-reduction KPIs for high-impact categories, including product purchases, digital services, purchased services, travel and commuting.
- Integrate carbon impact conditions into service purchasing and supplier selection, including supplier engagement, supplier surveys and ongoing monitoring.
- Optimise cloud resources and remove unused or underutilised cloud services.
- Assess opportunities to host data in locations with lower-carbon electricity mixes, subject to operational, security, and resilience requirements.
- Increase the proportion of activity-based emissions data to improve the accuracy of future greenhouse gas assessments.
- Continue to communicate emissions performance, reduction targets and reduction initiatives to stakeholders, suppliers and employees.
- Review options for certified greenhouse gas reduction or sequestration projects for residual emissions that cannot be eliminated through direct reductions.

Carbon Reduction Projects

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard4 and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
